

Deworming this summer

John F. Currin
PMM
VMRCVM

Who?

When?

What?

Who is likely to benefit from deworming in the next 6 weeks?

1. Spring born calves

- Expect 20+ pounds

2. Stocker calves that were dewormed at turnout with a product other than LongRange

- Expect 20+ pounds

When do we deworm them?

Spring born Calves

- Mid July-Mid Aug

Stocker Calves

- July

What do you use?

- Spring born calves
- White paste dewormers

Pros

- Opportunity to use a different class

Cons

- No persistent activity so it only clears the worms in the calf
- Have to catch heads

What do you use?

- Spring born calves
- Pour-on dewormers

Pros

- Short term fly control
- Don't have to catch heads

Cons

- Less consistent blood levels

What do you use?

- Spring born calves
- Injectable dewormers

Pros

- More consistent blood levels
- LongRange could provide more all the deworming they need through fall

Cons

- No fly control
- Have to catch heads

What do you use?

- Stocker calves
- White paste dewormers

Pros

- Ability to deworm without catching
- Opportunity to use a different class

Cons

- No persistent activity so it only clears the worms in the calf

What do you use?

- Stocker calves
- Pour-on dewormers

Pros

- Short term fly control
- Don't have to catch heads
